

Eaton Vance Floating-Rate Advantage Fund

A diversified, research-driven approach to floating-rate loan investing.

The Fund: Managed by Eaton Vance, a pioneer in floating rate loans since 1989, this portfolio diversifier provides broad exposure to the floating rate loan market. In depth, bottom up credit research and broad diversification are this Fund's cornerstones, managed by one of America's largest and most experienced loan managers.

The Approach: Invests broadly across the floating rate loan market, providing diversified exposure to the asset class and its many sectors, credit tiers and issuers. Fund employs leverage for the purpose of acquiring additional income-producing investments, which may increase risk and return potential.

The Features: Floating rate loans have typically performed with low correlation to traditional equity and fixed income markets, providing important diversification benefits for investor portfolios. Low duration and loans' floating rate structure may help reduce interest rate risk and lower portfolio volatility.

Growth of \$10,000 (10-year period ended June 30, 2024)

Investment Performance (% net of fees) in USD

	Cumulative (%)			Annualized (% p.a.)

Morningstar LSTA US Leveraged Loan TR USD Index	13.32	-0.77	5.20	3.12	8.64	0.44	4.12	10.16	-0.69	1.60

Performance data quoted represents past performance, which is no guarantee of future results, and current performance may be lower or higher than the figures shown. For the Fund's performance as of the most recent month-end, please refer to eatonvance.com. Investment returns and principal value will fluctuate and fund shares, when redeemed, may be worth more or less than their original cost.

Performance and fund information is as of June 30, 2024, unless otherwise noted. Returns are net of fees and assume the reinvestment of all dividends and income. Returns for less than one year are cumulative (not annualized). Performance of other share classes will vary.

Growth of Investment illustration assumes reinvestment of dividends and capital gains and application of fees, but does not include sales charges. Performance would have been lower if sales charges had been included. Results are hypothetical.

Total return prior to the commencement of A and I Shares reflects returns of Eaton Vance Prime Rate Reserves, the Fund's Predecessor, adjusted, where indicated, to reflect applicable sales charges (but were not adjusted for other expenses). If adjusted for other expenses, returns would be lower.

Where the net expense ratio is lower than the gross expense ratio, certain fees have been waived and/or expenses reimbursed. These waivers and/or reimbursements will continue for at least one year from the date of the applicable fund's current prospectus (unless otherwise noted in the applicable prospectus) or until such time as the fund's Board of Trustees acts to discontinue all or a portion of such waivers and/or reimbursements. Absent such waivers and/or reimbursements, returns would have been lower. Expenses are based on the fund's current prospectus, in effect as of the date of this fact sheet. For information on the applicable fund's current fees and expenses, please see the fund's current prospectus. The minimum investment is \$1,000 for A Shares and \$1,000,000 for I Shares.

Credit ratings are categorized using S&P Ratings, which are subject to change, apply to the creditworthiness of the issuers of the underlying securities and not to the Fund or its shares. Credit ratings measure the quality of a bond based on the issuer's creditworthiness, with ratings ranging from AAA, being the highest, to D, being the lowest based on S&P's measures. Ratings of BBB or higher by S&P are considered to be investment-grade quality. Credit ratings are based largely on the ratings agency's analysis at the time of rating. The rating assigned to any particular security is not necessarily a reflection of the issuer's current financial condition and does not necessarily reflect its assessment of the volatility of a security's market value or of the liquidity of an investment in the security. Holdings designated as "Not Rated" are not rated by S&P

[#] May not sum to 100% due to rounding.

The information herein has not been based on a consideration of any individual investor circumstances and is not investment advice, nor should it be construed in any way as tax, accounting, legal or regulatory advice. To that end, investors should seek independent legal and financial advice, including advice as to tax consequences, before making any investment decision.

Past performance is not indicative of future results. Subject to change daily. Fund information is provided for informational purposes only and should not be deemed as a recommendation to buy or sell any security or securities in the sectors and countries that may be presented. Index data displayed under characteristics and allocations are calculated using MSIM and/or other third-party methodologies and may differ from data published by the vendor.

DEFINITIONS: **Average maturity** – weighted average of the maturities of the underlying securities in the portfolio. A bond's **average price** is calculated by adding its face value to the price paid for it and dividing the sum by two. The average price is sometimes used in determining a bond's yield to maturity where the average price replaces the purchase price in the yield to maturity calculation. **Duration** is a measure of the sensitivity of the price (the value of principal) of a fixed income investment to a change in interest rates. Duration is expressed as a number of years. Rising interest rates mean falling bond prices, while declining interest rates mean rising bond prices. **Leverage** represents the liquidation value of the Fund's Variable Rate Term Preferred Shares (VRTP Shares) and borrowings outstanding as a percentage of Fund net assets applicable to common shares plus VRTP Shares and borrowings outstanding. Use of leverage creates an opportunity for income, but creates risks including greater price volatility. The cost of leverage rises and falls with changes in short-term interest rates. The Fund is required to maintain prescribed asset coverage for its borrowings, which could be reduced if Fund asset values decline. **SEC 30-day yield** is a measure of the income generated by the portfolio's underlying asset over the trailing 30 days, relative to the asset base of the portfolio itself.

INDEX INFORMATION: The Morningstar LSTA Leverage Loan Index is an index that covers more than 1,100 loan facilities and reflects the market-value-weighted performance of U.S. dollar denominated institutional leveraged loans. Prior to August 29, 2022, the index name was S&P/ LSTA Leveraged Loan index. Unless otherwise stated, index returns do not reflect

the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. e. It is not possible to invest directly in an index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the fund.

RISK CONSIDERATIONS: The value of investments held by the Fund may increase or decrease in response to economic, and financial events (whether real, expected or perceived) in the U.S. and global markets. Loans are traded in a private, unregulated inter-dealer or inter-bank resale market and are generally subject to contractual restrictions that must be satisfied before a loan can be bought or sold. These restrictions may impede the Fund's ability to buy or sell loans (thus affecting their liquidity) and may negatively impact the transaction price. It may take longer than seven days for transactions in loans to settle. Due to the possibility of an extended loan settlement process, the Fund may hold cash, sell investments or temporarily borrow from banks or other lenders to meet short-term liquidity needs. Loans may be structured such that they are not securities under securities law, and in the event of fraud or misrepresentation by a borrower, lenders may not have the protection of the anti-fraud provisions of the federal securities laws. Loans are also subject to risks associated with other types of income investments. Investments in debt instruments may be affected by changes in the creditworthiness of the issuer and are subject to the risk of nonpayment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. Borrowing to increase investments ("leverage") may exaggerate the effect of any increase or decrease in the value of Fund investments. Investments rated below investment grade (sometimes referred to as "junk") are typically subject to greater price volatility and illiquidity than higher rated investments. As interest rates rise, the value of certain income investments is likely to decline. The London Interbank Offered Rate or LIBOR, is used throughout global banking and financial industries to determine interest rates for a variety of financial instruments (such as debt instruments and derivatives) and borrowing arrangements. The ICE Benchmark Administration Limited, the administrator of LIBOR, ceased publishing certain LIBOR settings on December 31, 2021, and is expected to cease publishing the remaining LIBOR settings on June 30, 2023. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that currently rely on LIBOR, such as floating-rate debt obligations. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, currency exchange rates or other conditions. Changes in the value of investments entered for hedging purposes may not match those of the position being hedged. The Fund is exposed to liquidity risk when trading volume, lack of a market maker or trading partner, large position size, market conditions, or legal restrictions impair its ability to sell particular investments or to sell them at advantageous market prices. The impact of the coronavirus on global markets could last for an extended period and could adversely affect the Fund's performance. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the Fund prospectus for a complete description.

Ratings: The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account sales loads.

OTHER CONSIDERATIONS: Diversification cannot ensure a profit or eliminate the risk of loss. Fund invests in an affiliated investment company (Portfolio) with the same objective(s) and policies as the Fund. References to investments are to the Portfolio's holdings.

Leverage represents the liquidation value of the Fund's borrowings outstanding as a percentage of Fund net assets applicable to common shares plus borrowings outstanding. The Fund is required to maintain prescribed asset coverage for its borrowings, and may be required to reduce its leverage at an inopportune time if Fund asset values decline.

Please consider the investment objective, risks, charges and expenses of the fund carefully before investing. The prospectus contains this and other information about the fund.
